

WAL to compare intervals of time (using clock faces – analogue).

Do it:

Use $<$, $>$ or $=$ to complete the statements.

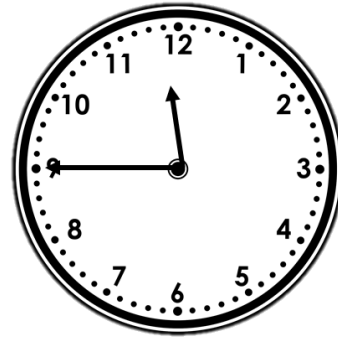

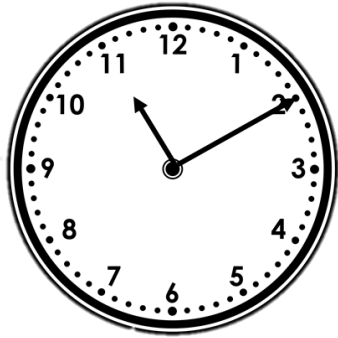

Secure it:

True or false? Explain why.

- 25 minutes is less than half an hour.
- 50 minutes is more than an hour.
- An hour and a quarter is more than 80 minutes.
- Half past two to five minutes to 3 is longer than 20 minutes.

Deepen it:

It takes Colin 5 minutes to complete three maths problems. How many problems can he complete in this duration of time?

If he started at 25 to 4 and completed the same amount of questions, what time would he finish?
