

2.3.21 Year 3 WALT: To be able to Subtract fractions with the same denominator within one whole

2.3.21 Do it

WALT: To be able to Subtract fractions with the same denominator within one whole

Calculate:

$$\frac{2}{3} - \frac{1}{3} = \quad \square = \frac{7}{8} - \frac{2}{8}$$

$$\frac{2}{5} - \frac{1}{5} = \quad \frac{5}{8} - \frac{3}{8} - \frac{1}{8} =$$

$$\frac{4}{5} - \frac{2}{5} =$$

Deepen it

Find the missing digits.

$$\frac{\square}{5} - \frac{\square}{5} = \frac{2}{\square}$$

$$\frac{\square}{8} - \frac{4}{\square} = \frac{\square}{8}$$

$$\frac{7}{9} - \frac{\square}{9} = \frac{\square}{\square}$$

Solve each calculation in several different ways where possible.

Solve the calculations altogether using the digits 1, 2, 3, 4, 5, 6, 7, 8 and 9 once each.

2.3.21 Secure it

WALT: To be able to Subtract fractions with the same denominator within one whole

Colin thinks that:

$$\frac{5}{8} - \frac{3}{8} = \frac{2}{0}$$

Explain why he is incorrect.
