WALT: To be able to Use written method to divide a 3-digit number by a single digit number (hundreds = multiple of divisor, tens > divisor) with no remainder

Coco is incorrect because she has placed the digits in the wrong place as it looks like she will be dividing 3 by 969 and you can not divide a smaller number by a larger number.

The correct answer is:

$$\begin{array}{r} 323 \\ 3 \overline{)969} \end{array}$$
