

We are Scientists...

Materials and States of Matter

We are curious, we are unique, we are together, we are Whiteshill!

Properties of Materials

Material – what an object is made from.

Magnetic – attracted to magnets.

Hard/soft

Shiny/dull

Rough/smooth

Waterproof

Transparent/opaque

Changes

Melting – solid turns into liquid

Reversible change of state:

Solids – hold their shape e.g. ice (0 degrees Celsius)

Liquids – form a pool not a pile e.g. water

Gases – escape from an unsealed container e.g. steam (100 degrees Celsius).

How to shape materials

Squash (flat)

Bend (curve)

Twist (curl)

Stretch (longer)

Uses of everyday materials

Wood – furniture and matches

Metal – cars and coins

Plastic – bags and bottles

Glass – windows and glasses

Reduce – use it less

Re-use - use it again

Recycle - turn it in to something new

Transparent

Opaque

Water Cycle

Evaporation - sun heats water and it rises as vapour to the air

Condensation - vapour cools back to liquid and forms cloud

Precipitation - clouds get heavy and water falls to ground as rain or snow.

John Boyd Dunlop

Invented Tyres

Rock

Water

Plastic

Wood

Glass

Metal

Charles Macintosh

Invented waterproof raincoat
